► GORE-TEX® Front Entry

Kokatat's supple, high count nylon, 3-layer GORE-TEX® is completely waterproof, breathable and durable. This fabric is the cornerstone of our GORE-TEX® dry suits. Extensive use of articulated patterning and years of production experience and testing make the GFE the most popular dry suit on the planet for paddlers, rafters, sailors and other watersport aficionados. Female paddlers have the option of adding a relief zipper or drop seat zipper to the GFE.

► Ronin Pro

A trimmed-down profile and unique internal harness provide a comfortable, secure fit, full spinal and improved side protection. Reinforced adjustable, thermal molded foam padded shoulders with non-slip Hypalon® grip panels, an integrated sleeve for a cowtail or small tow tether, strong swimmer harness and rescue belt, and superlative construction methods set a new standard in PFD design.

Peter Schödl, Sea2Summit Expedition: "In July 2009 we embarked on a 563 km sea kayak expedition to explore the 1000 islands of the Croatian Sea, a historical junction of the orient with the occident. The Bora, a notorious and fierce alpine katabatic wind, was a constant threat on our journey from rocky moonscape-like islets via subtropical bays to the old fortress of Dubrovnik, the "pearl of the Adriatic", an UNESCO world heritage site."
